## US and Iran reach preliminary agreement to end hostilities

- The United States and Iran have announced a deal aimed at ending the current conflict in the Middle East. Under the terms of the agreement, Iran will lift shipping restrictions on the Strait of Hormuz in exchange for the US lifting its naval blockade of Iranian ports. While Iran has stressed that any cessation of hostilities should include Lebanon, it is not yet clear if Israel will agree to this. The formal deal will likely be signed on June 19, with further details to follow. Negotiations on Iran's nuclear program are expected to take place during a 60-day period following the signing of the agreement. The prospect of improved global energy supplies cheered equity markets in Asia and Europe. Oil prices fell due to the deal with Brent falling by 5% so far on Monday.
- Consumer prices, as measured by the consumer price index (CPI), rose 0.5% in May. That's slightly below April's 0.6% increase. Energy prices went up by 3.9% in May, driving overall price growth. Compared to a year ago, consumer prices were up 4.2% (also called inflation) in May, the highest since April 2023. Energy prices rose 23.5% from a year ago, with fuel oil prices up 58.9% and gasoline prices 40.5% higher. Core consumer prices, which exclude food and energy, rose 2.9% in May from a year ago.
- Producer prices for final demand rose 1.1% in May, the same pace of growth as April. Prices of final demand goods went up by 2.8% in May, the largest monthly gain on record. Prices for energy goods rose by a staggering 10.7% during the month, following a 7.5% increase in April. Overall, producer prices were up 6.5% from a year earlier, the fastest pace since November 2022. If production costs keep rising, businesses may pass some or most of these costs to consumers, adding to more upward pressure on consumer inflation.
- Existing home sales rose by 3.2% in May to a seasonally adjusted annual rate of 4.17 million units. This increase (following a 0.7% rise in April) was the largest since September 2025. Compared to a year ago, sales were up 3.2% in May. The median sales price of existing homes rose 1.3% from a year ago, while the inventory of unsold homes went up by 3.3%. Elevated mortgage rates continue to weigh on both supply and demand for existing homes.
- The US trade deficit (in goods and services) narrowed to US$55.9 billion in April from US$56.6 billion in March. This was primarily due to a 2.6% increase in exports, supported by higher exports of capital goods and industrial supplies and materials. Imports growth slowed slightly to 2% in April from 2.3% in the previous month.

**Figure 1. Rising energy prices pushed up headline CPI inflation to 4.2% in May, the highest since April 2023**

**Figure 2. Rising producer prices continue to pose upside risks to consumer inflation with businesses likely to pass these higher costs to consumers**
